To Our Patrons

Thank you for your loyal support during this past year, it is greatly appreciated. We will as usual endeavor to supply the best first-class rooted cuttings taken from strong, healthy field grown stock so that we may further merit your confidence and patronage. We hope that throughout these pages you will find listed many novelties in Chrysanthemums, any of which will without question lend added splendor to your fall garden. **When making your selections, please give a second choice, if possible.** You are cordially invited to visit our gardens at any time.

SUNNY SLOPE 'MUM GARDENS

TERMS OF SALE

Important—Read Carefully Before Ordering

Quotations: The prices quoted are as low as can be made for strictly first-class stock and are for U. S. Currency. 2½% sales tax must be added for all deliveries made in the State of California. This list cancels all previous quotations.

Time of Our Shipments: Chrysanthemum plants are available from April 1st to July 1st inclusive.

Filing Orders: All orders are filled in strict rotation, carefully labeled, lightly and securely packed, and delivered to the carriers in good condition. In case stock of certain varieties is exhausted, we reserve the right to decline the order. To partially avoid such action, place your order early, so that the plants may be set aside. Assist in prompt delivery by using order sheet.

Owing to the increased cost of packing materials and labor, we are compelled to make a charge of 25 cents for packing any order of less than \$1.00.

Shipments: Due to the increasingly heavy loads carried by the Post Office Department, we suggest that whenever possible the shipment be made by Railway Express, thus insuring a more prompt delivery and less likelihood of damage through delayed transit. If plants are to be shipped by Parcel Post add cost of postage, **as all prices quoted are F.O.B. San Gabriel, California.** As a basis for computing weight use 12 ounces for each 12 plants, packing included. Your Post Office will furnish postal rates upon request.

Claims for Damage: All claims for damage must be assumed and entered against the carrier by the buyer. Inasmuch as we have no control over the transportation agencies, we cannot be responsible for plants damaged in transit by either extremes in temperature or injuries due to delayed deliveries or rough handling.

No Guarantee: While we exercise utmost care in executing all orders to keep our stock true to name, we give no warranty, expressed or implied, and cannot guarantee or be in any way responsible for the crop, either as to variety or product. . . . ALL ORDERS are accepted on the above terms and are not subject to return.

Feather and Spidery Varieties

Our 1944 Introductions

AGNES—A strikingly beautiful pale orchid pink spider. Fine tubular petals widening near the ends, curling ribbon like and showing to advantage the barbs of an attenuated fish hook tip. Good foliage and stem. Tall. Matures Nov. 5th. **\$1.00 each; \$10.00 per doz.**

ALASKA—Large white with slender tubes terminating in fishhook tips. An outstanding bloom of good size. Has stiff stem and excellent foliage. Medium height. Matures Oct. 20th.

30 cents each; \$3.00 per doz.

AURA—Similar in most characteristics to Wilhelmia insofar as coloring is concerned. Is somewhat whiter when matured but not quite so large. Tall. Matures Nov. 20th.

50 cents each; \$5.00 per doz.

CATALINA—A most beautiful shade of soft orchid pink with slender petals hooked at tips. Extremely graceful in formation. Medium height. Matures Nov. 10th.

\$1.00 each; \$10.00 per doz.

GOLDEN WONDER—A flower that is aptly named, for verily it is a golden wonder. In color it is a lively, brilliant yellow. It has the conventional slender, tubular petals with slightly upturned fishhook tips billowing downward from an unusually deep full center. It is one of the most outstanding of this type of bloom and when disbudded will compare most favorably with any exhibition spider within our knowledge. Medium height. Matures Nov. 10th.

75 cents each; \$7.50 per doz.

BUNBU

PAUL MILLER

MISS GENA HARWOOD

LUCERNE—Light buff tubular petals, the majority of which are open at end, showing deep red within, the balance coming to a sharp point.

\$1.00 each; \$10.00 per doz.

MARJORIE—A most charming shade of salmon pink. Graceful medium tubes which terminate in fishhook tips. Excellent foliage and stem. Medium height. Matures Nov. 15th.

\$1.00 each; \$10.00 per doz.

MAUD ELLEN—Has straight tubular petals. A rich cream in color. Medium height. Matures Nov. 15th.

50 cents each; \$5.00 per doz.

SNOWY—A good late pure white spider with very slender tubes terminating in upturned hooked tips. An excellent example of the fishhook type. Tall. Good foliage. Matures Dec. 1st.

50 cents each; \$5.00 per doz.

WILHELMINA—Although catalogued as white, it has such a wide range of tones and tints in the course of development—the least of which is a decided orchid blush radiating from a

center unquestionably delicate Chartreuse in color—the predominance of white when fully matured moves us to do so. The beauty of this bloom is greatly enhanced by the gracefully upturned barbed hooks terminating its slender tubular petals. Tall. Matures Nov. 1st.

75 cents each; \$7.50 per doz.

WILSHIRE—A deep cream yellow spider with straight tubes. Good stem and foliage. Short. Matures Nov. 15th.

35 cents each; \$3.50 per doz.

WINONA—A very light yellow shading to a canary yellow at center, which is open. The petals are fine quill type terminating in a semi spoon tip. Lovely in all respects. Medium height. Matures Nov. 5th.

50 cents each; \$5.00 per doz.

YELLOW DELIGHT—An excellent, rich cream colored spider having straight sharp cordlike petals neither open nor flat. When properly tended this plant will produce blooms from 10 to 12 inches in diameter. Tall. Matures Oct. 20th.

\$1.00 each; \$10.00 per doz.

CHAS. HOWE—A true shell pink in color. Has straight graceful petals slightly incurved. Not very full, but its color is so very unusual that it makes a most charming bloom. Matures Nov. 1st. **35 cents each; \$3.50 per doz.**

COLORADO—A large, full, red reflex with buff reverse. Has tubular petals a portion of which are sharply pointed. The balance are open at the end and reveal to the eye an unexpected ovate splash of dazzling red within. A vivid example of the manner in which a combination of coloring, eccentric tubular construction and perfection of form may easily be responsible for the epitome of splendor. Tall. Matures Nov. 1st.

G. KONNO—A most beautiful shade of salmon rose. Has unusually wide petals radiating from a center which has an exotic swirl. Quite outstanding. Matures Oct. 15th. **35 cents each; \$3.50 per doz.**

J. C. TAGGARTS—A most beautiful shaped bloom of soft bronze. The quilled petals are covered with small hair which adds much to its delicate beauty. Matures Nov. 1st. (See illustration below.) **35 cents each; \$3.50 per doz.**

KIMIE TASHIMA—Very bright golden single of unusual formation. Short. Matures Oct. 25th.

LAVENDER FEATHER—This is a very beautiful deep lavender feathery type. Grows tall and is very striking in appearance. Matures Oct. 25th.

YOMEI

MIGNONETTE—Bright yellow with fine, wavy, thread-like petals. Has much the appearance of a thistle bloom. A distinct departure from the various orthodox types of chrysanthemums. Good stem and foliage. Tall. Matures Oct. 25th.

MONTECITO—Large quilled petals with open ends. Flesh pink radiating from a darker pink center. Tall. Matures Nov. 1st.

35 cents each; \$3.50 per doz.

PAULINE—This makes a most beautiful bush of soft yellow when stopped two or more times. Has tubular petals terminating with spoon tips. Matures Nov. 1st.

TAGGARTS

PINK EXQUISITE

PINK EXQUISITE—It is quite properly named, as it is a most exquisite shade of pink. Reflex petals which radiate from a center which has a most unique swirl. It is best to disbud this variety, having several stems to the plant. Medium height. Matures Nov. 1st. (See illustration page 10.) **50 cents each; \$5.00 per doz.**

PURPLE FROST—Very deep purple with broad feathery petals which have just a small line of silver along each side terminating at the points. Extremely beautiful when disbudded. Medium height. Matures Nov. 5th.

ROBERT BACON—Similar in type to but very much larger than Yellow Matchsticks. Has a single row of reddish bronze quilled petals radiating from a central button of gold. Golden spoon tips. Strong stem and good foliage. Shows to best advantage when disbudded. Medium height. Matures Nov. 10th.

WHITE SPOON—A double row of quilled, spoon-tipped petals radiating from an open center and cupped slightly upward. It is much fuller than any of the other spoon tip types. Medium height. Matures Oct. 30th.

WINNIE—A pure white bloom with a single row of quilled, spoon-tipped petals radiating from a yellow button. Tall grower. Matures Nov. 15th.

YELLOW MATCHSTICKS—Quilled petals with spoon-like tips. Medium sized blooms of a soft yellow. Unique and intriguing in appearance. Very prolific bloomer. Matures Nov. 10th.

YELLOW SPOON—Same as White Spoon in all respects save color.

YELLOW TAGGARTS—Same as J. C. Taggarts, except in color, which is yellow. (See illustration page 10.)

YOKI IMPROVED—White tubular petals terminating in spoon tips. Matures Nov. 5th.

YOMEI—Similar in formation to Robert Bacon. The color effect, however, is the reverse. The quilled petals are golden in color and terminate in red spoon tips. Good either in sprays or disbudded. Tall. Matures Nov. 10th. (See illustration page 10.)

Anemone Section

ESTRELITA

The Anemone flowered chrysanthemum consists of one or more rows of flat or tubular ray florets with shorter quilled or tubular disc florets sometimes of the same color, sometimes otherwise. The large flowering Anemone types, all of those catalogued herein being included, are usually pinched when small, permitting four to six growths to continue until buds are formed. Disbudding is a matter of individual taste. If allowed to flower without restriction each stem will produce a large spray or cluster of blooms. This type of mum is of marvelous beauty and should be given full consideration by those who are looking for something artistic and unusual.

Cascade Varieties

• The following listed varieties are all of exceptional beauty and exquisite daintiness. While chosen primarily for the ease with which they may be trained to hang or "cascade" downward, there are numerous ways in which they may be made to yield equally gratifying results with a minimum expenditure of time and effort.

Planted in the garden and stopped a number of times in the usual manner these little-heralded floral-cultural phenomena will develop a rugged bushiness of free flowering growth that for sheer beauty may, perchance, outrival the much vaunted glory of the larger and more pretentious of their brethren.

Grown in pots and without special training they may be taken care of in the open until such time as it is desirable to transfer them indoors where their presence may lend a bit of sunshine to what otherwise might be a colorless interior. Let the fall season of dark shadows and crispness of air be brightened and warmed by the comforting cheer irradiating from one or more well-groomed plants of this type strategically placed on window ledge, bench or table.

Tying and Pinching (see drawings and photos)

TYING AND PINCHING (See drawings and photos above). When the plant grows to about 12 inches tall (drawing No. 1) it is bent from about the middle and the end tied to a fairly long No. 12 size galvanized wire which is bent at an angle of 45 degrees (as in Fig. 2). The supporting wire should point to north and the leader must be tied to it with raffia (Figs. 2 and 3) at least every seven days. All the laterals and the sub-laterals should be pinched at every second or third joints as in Fig. 2, and this operation should be repeated continuously as they grow until around September 15th. As the plant increases in width an additional support is necessary to prevent toppling over on one side as in Fig. 4. The main leader is lowered gradually so that it will be in the horizontal position around September 15 as in Fig. B. When the buds begin to form the main stem starts the gradual vertical bending from its horizontal level with the surface of the plant now facing south as in Picture 5. When the buds show color, the pot is placed on high position so that the sprays will not touch the ground and bent to the final vertical position (as in Fig. C. Also see cut for Jane Harte).

PREPARATION OF SOIL. Prepare the compost by mixing well three-fifths by volume of medium heavy

loam and the balance two-fifths of leaf mold and well decayed cattle manure (proportion of two-thirds leaf mold and one-third manure). In addition to this a 5-inch potful of bone-meal may be added to every three bushels of this soil. This compost may be prepared in large quantity and can be stored in shelter for later use.

FERTILIZER. Twice a month applications of commercial fertilizers (Gaviota, vigoro, etc.) should be made during the growing months starting from early June up to the formation of their buds. The amount of fertilizer to be used depends largely upon the size of the plant. It is cautioned not to over-feed the plant, always remembering that very light applications frequently made are far better than over-dosing the plant at any single application.

RE-POTTING. The plants should be shifted into 6-inch pots when bought from us in little pots. Further two to three shiftings into larger pots are required during the season, and these shifts should be made before the plants form their first root network on the inside of the pot. The final potting may be made about the middle of August and the sizes of pots used depends on the size and variety.

POT PLANT TYPES

The following pot plant varieties are also recommended for border plantings because of their dwarf growing and free branching qualities.

***AMELIA (Pink Cushion)**—A dwarf specie. Fully double and suitable for home garden use, potting or landscape work. When planted early it will attain a bushiness of growth not to be exceeded by its height. Under favorable conditions blooms will develop in June and continue until frost. Short. Matures August.

***BRONZE CUSHION**—Same as Amelia in all respects save color which is a coppery bronze.

CINCINNATI—Golden yellow large pompon. Best when disbudded. Short. Matures Oct. 20th.

***GOLDEN CUSHION**—Same as Amelia in all respects save color, which is a deep yellow.

Those noted with asterisks (*) will commence blooming in July or August up until the approach of frosts.

POMPONETTE—Small yellow pompon. Very short grower. Matures Sept. 25th.

QUEEN OF PINKS (Pink Mandel)—Beautiful shade of pink. Large pompon which is best disbudded. Short. Matures Nov. 10th.

***RED CUSHION**—Same as Amelia in all respects save color, which is a deep red.

RICHARD MANDEL—Pure white large pompon. Best when disbudded. Short. Matures Nov. 10th.

ROYAL RED—A deep red pompon of the button type. Short. Matures Oct. 25th.

***WHITE CUSHION**—Same as Amelia in all respects save color, which is white. Short. Matures August.

YELLOW BEAUTY—Golden yellow large pompon. Best when disbudded. Short. Matures Nov. 10th.

CULTURE FOR POT PLANTS

Pot growing of chrysanthemums should be encouraged in several states where early freezing conditions prevail. When they are pot-grown, they can be easily removed into shelter when the hazards of freezing, wind, and rain occur. Again, especially when the growing ground is limited in the garden, potted plants may find place on the side of walks, on edges of steps or in porches if one-half day sunshine is available.

Mostly all the chrysanthemums of our fall displays are grown in pots. This practice is carried by us because old flowers are being removed constantly as the season progresses. Our display ranges from single flowering exhibition flower to 500-blossoms specimen plant in single container.

Fresh cuttings are potted immediately into 5- or 6-inch pots around May 15th. Plants should not be allowed to become pot-bound before shifting into larger pots.

Other culture being similar to those of ground plantings.

Plants may be allowed to bear flowers as follows:

	No. of Stems
EXHIBITION TYPES (when largest blossoms desired)	1
EXHIBITION TYPES (ordinary)	2 or more
COMMERCIAL TYPES	3 or more
SPIDER TYPES	5 or more
DISBUDED ANEMONES, POMPONS, ETC.....	6 or more

SMALL BOSSOMING VARIETIES should be pinched several times to form compact bush. Two or more plants may be placed in a pot if large bush is desired. Regarding potting soil, fertilizer, and shifting of pots refer to cascade culture on page 35.

Cultural Suggestions Commercial & Exhibition Types

SOIL PREPARATION. Prepare the beds early by spading in well decayed cattle manure or bone meal working in thoroughly to a depth of 12 to 15 inches. Use peat if the soil is too sandy or too heavy.

FERTILIZING. Few applications of commercial fertilizers such as "Gaviota," "Vigoro" or other complete fertilizers should be used during the summer months. The feeding should be avoided during the periods of extreme heat or when the soil is too dry. Water the soil before applying if it is necessary. It should be stopped when the buds are large enough to make the final selection, Fig. 2 above).

STOPPING. When the plant is established in your garden and when it has developed 2 or 3 pairs of matured leaves, the center or the main growth is nipped off. Then the plant should be restricted to two or three shoots in order to obtain larger blooms. For the late blooming variety, the main growths of these new shoots may be nipped off again around July 15th in order to regulate the height, allowing only the original number of new shoots to rise per stem.

For the large anemones and pompons, allow 6 to 8 growths to a plant. Other cultures for these being similar with those of the larger flowering varieties.

DISBUDDING (see drawing above). Immediately after the new shoots of your selection begin to send out side laterals, they should be removed very close at the base (see lowest lateral of Figure 1) at regular intervals about once a week. The basal shoots should be removed also as they appear. This procedure should be adhered to very religiously in order to obtain successful results.

The first bud produced by the plant is called the "Crown" bud and is distinguished by being surrounded by leaves. The "terminal" bud appears later in clusters surrounded with several flower buds.

The procedure of "taking buds" depends very largely on the variety and no fast rules can be given, but we recommend reserving terminal buds for the majority of the early flowering commercial and exhibition types in Southern California. The safest rule, we find, is not to save buds formed before August 20th in our district. The retention of too early crown buds often results with large percentage of crippled flowers, especially when large amount of nitrogen fertilizer remains in the soil unconsumed by the plant. Again, the hottest period of the year usually comes during the month of September and early October, the hazards of burning of petals and fading of colors are too frequent when early crown is retained in this district.

The final selection of bud should not be made too hastily nor when buds are very small (see Figure 1). It is also advisable to allow an alternate bud (see Figure 2) to remain until one is certain of all defects when final selection is being made (Figure 3).

PESTS. Common pests and diseases are thrips, aphids, leaf-tyers, cut worms, mildews, etc. Plants should be examined frequently and sprayed with proper insecticides as recommended by dealers as soon as they are detected. After September 1st we recommend spraying the plants twice a month until buds begin to show color.

STAKING. Every individual stem should be supported with stake or by other means to hold the blooms upright.

Culture for Bush or Garden Varieties

Under these types are pompons and buttons, anemones, singles and hardy. These varieties are most effective in the gardens when grown low with as much growth as possible. This is obtained by pinching off the center

of all the laterals two or three times up to the 1st or 10th of August. This method will prevent the plants from toppling too freely with minimum support.
